Design log
**Discovery board**

The software I have used to create my Discovery board Powerpoint/fireworks/windows movie maker_____

Initial Design - This should include an image of your initial ideas	*Draft Design - This should include your first attempt or draft logo*	*Final Design - This should include an image of your final design.*
Feedback received: This looks horrible. The links look scruffy and the logo clearly isn't working.	Feedback received: this is better, but the links still look scruffy. Consider moving them elsewhere.	Feedback received: this is better, with the links on the finger tips. And the front page is a Fabulous.
Changes made: I made this using PowerPoint and inserting some picture files from the internet, I have used heart shapes scattered across my discovery board to share a common element in my other products. My menu consists of a page with the logo in the corner and heart logos on the side.	Changes made: I have added a hand shape in which all of the links are placed in the palm; also the logo is on the bottom right hand corner. The homepage is now full of hugging pictures as well, in a form of a collage.	Changes made: I have placed the links on the fingers of the hand; also I have added more sound clips in the sound section. My main menu is now more subtle and my video clip is now made using primary images, which I made in fireworks and put them together in windows movie maker.

Describe which software tools you have used and how they helped you to develop your product:
