

**Design log**  
**Podcast**

The software I have used to create my Podcast

**Initial Design** - This should include an image of your initial ideas

Feedback received: this is a bit odd, with the pink text and the crappy picture.

Changes made: My first podcast contained only a video of one person and the effects of a hug, then a photo at the end, with ending captions. I took the films at home, by camera then I put them together using windows movie maker.

**Draft Design** - This should include your first attempt or draft logo

Feedback received: this is better, but the podcast needs more video.

Changes made: I have put in a few more pictures in at the end and increased the length of my speech. It goes on to talk about how the simple act can change very much.

**Final Design** - This should include an image of your final design.

Feedback received: this is better, as the videos show what to do to do your action. Innit.

Changes made: I have included an extra video, and also a final scene picture. The extra video shows, how the person who receives a hug, then goes on to do good things for others.

Describe which software tools you have used and how they helped you to develop your product:
