## Design log Web page

The software I have used to create my Web page \_\_\_

Final Design - This should include an image of your final design. My chosen action is to simply hug somebody, whenever you get a chance, or a moment where it could help or be esary, because by giving a hug,you show somone tha there is another who cares about them and the reciever will act positivly and freindly to others themselves through the day. A mere hug can easily change the world as if everyone was happy and helping each other, then crime rates, accidents and many other problems would be red or stopped altogether. So have a look at my podcast below ,and see just a few of the ways you can bestor happines to others ,and why it counts We Are what we do Here is a link to my podcast, It will help you to see why such a website showing all of simple and easy act ,can do so the different actions , much for people.

Feedback received: this looks like it has some good ideas, however, the text is a bit brief and the pictures are no good. Choose better ones.

Changes made: in fireworks I made a back ground using arms curled as a border, then I put in the podcast and we are what we do link, and then sliced them both.

Then after exporting them into

Dreamweaver I fit in the logo and then some text to go with all of the links, and a bit promoting the action. Also I placed two pictures at the bottom of the web page.

Feedback received: It looks very similar to the initial design yet I prefer the logo to be at the bottom. I think it could do with a PICTURE!

Changes made: I removed the pictures and added more info on the action, I replaced the pictures slot with the logo, and rearranged the format of the page

Feedback received: this is a lot better. It has the right amount of text and a suitable picture. The logo doesn't get in the way either.

Changes made: I placed much more text for the action now, and also some info for the podcast and other link. I have inserted a picture at the side. And the logo sits on top.

ribe which software tools you have used and how they helped you to develop your product: Fireworks has helped to draw the arms in with a good degree of accurac Dreamweaver is ideal for making websites so it helped a lot with inserting things like logos and pictures.	у,
